

# What our customers say

**Peter Huemer**

CEO  
Huemer GmbH

Betonbohr &  
Schneidtechnik

"We use Amberg Navigator for several years to optimize tunnel refurbishment works. We enlarge old tunnels to fit to the new requirements. Within the short periods of time, we have to widen the tunnel sections to fit the new design. We use special task on Amberg Navigator (Tunnel Saw) to guide our cutters. Machine operator sees where to cut more material in real time on the screen of Amberg Navigator. Using this information operator navigates the cutter head accurately and confidently. We used this workflow on several projects, and we were always happy with it. It has saved us a lot of time and allowed us to closely follow the design, resulting in cost savings. In the last project we cut 30'000 m<sup>2</sup> cutting surface (approx. 11'000 m<sup>2</sup> tunnel viewing surface)."
