

# What our customers say

**Ralph Perez**

Owner / President  
New York Geomatics Inc

"We've been using Amberg Tunnel for years.

Amberg is superb in both generating robust deliverables in a fashion that our clients consider priceless as well as providing a user-friendly environment in which the data analysis process is straightforward and intuitive. We have utilized, mainly in terms of combining and comparing 3-D as-built pointcloud data with design elements. The magic of Amberg is that it automatically populates such a rich amount of metadata.

We are glad to have incorporated Amberg in our workflows and look forward to exploring and discovering more of its by-product applications in our future applications."
